CAREER GOAL

> *"To aggressively invest in my self-growth and become a great asset to any organization."*

WORK EXPERIENCE

Fall 2017

CodeChat
Worked with a 9-man team to design and build a chatting application that could run and compile code immediately via web. I was the assistant programmer for the JavaScript modules. I created designs for the specification, worked on the application's back-end socket.io connections, and also helped build the Node while putting in pieces in the database. Our whole system utilizes websockets between the webapp, the chat server, and the compiling server, making it as network performant as possible.

June 2018 Present

Feniex Industries – Software Development
Started as an intern with the engineering department. Using React Native, I repaired an abandoned application used on both the iOS and Android phone, then updated it to have the correct products and features for company and customer use.
Later I joined the marketing department where I was hired full time assisting the web team in re-skinning their current website and also developing a brand new platform called Build-A-Bar. This web application was built using Angular for the front-end and Druple for the back-end. Build-A-Bar is unique because no other Emergency Lighting company provides customization as detailed and complex like it.
Currently, I am with the Engineering team. Using Electron and React to build a custom innovative software inside Feniex's new controller. The software interprets JSON packets received from the OBD2 and the relay, which controls global states based on the users programmable input.

EDUCATION

2015 - 2018

Sam Houston State University, Huntsville
Computer Science Major
Information Systems Concentration
Kinesiology Minor

TECHNICAL PROFICIENCIES

Languages	Frameworks	Tools	Databases
Python	*Node.js*	*GIT*	*SQLITE*
Java	*Socket.io*	*NPM*	
C++	*Android*		
JavaScript	*Druple*		
	Angular		
	React Native		

SKILLS & EXPERTISE

- Time Management
- Organization
- Assertive
- Leadership
- Communication
- Multitasking
